MORE THAN 25 YEARS OF ENVIRONMENTAL ACTION

- ☑ We have been making continuous energy efficiency improvements to this facility based on our long-standing commitment to environmental stewardship. The most recent renovation included significant changes to make our facility and equipment more efficient.
- ☑ Advanced T8 electronic lighting is used to provide energy efficiency and excellent quality of light.
- ☑ The refrigeration system uses state-of-the-art technology to optimize energy performance while maintaining correct temperatures for product quality and food safety.
- ☑ Energy is recovered from the refrigeration system to heat the warehouse area.
- ☑ Automatic controls are used to reduce operating time and anti-sweat heaters in glass door freezers by approximately 70%, saving the equivalent amount of electricity used by seven households.
- ☑ Our refrigeration and air conditioning equipment use non CFC refrigerants to benefit the ozone layer.
- ☑ An automated leak detection system is used to provide an alarm in the event of a refrigerant leak.
- ☑ The heating and air conditioning system is designed to be energy efficient without sacrificing comfort for customers and staff.
- ☑ Ventilation equipment is shut off during unoccupied time to minimize heating costs.
- ☑ Exterior lighting is controlled automatically to minimize energy usage, yet ensure adequate lighting at night for safety and security.
- ☑ Recycling efforts include collection and recycling of checkstand bags for customers and material generated on site such as shrink wrap and corrugated cardboard.
- ☑ Reusable shopping bags are promoted.

EVERGREEN

Our actions have significantly reduced the impact we make on the environment. In the last 25 years, we have reduced the CO₂ output from CO-OP stores in Western Canada by more than 41,000 metric tonnes. Our efforts provide ongoing benefits to our members, our communities and future generations.
